

CASE STUDY

Lafayette Animal Shelter

GEOGRAPHICAL AREA:

Lafayette, Louisiana

ISSUE:

Looking to insulate building to keep temperatures down in local animal shelter.

SOLUTION:

Energy Protect™

Coverage: 3-coats

RESULTS:

- ✓ Provided thermal insulation in a thin film application
- ✓ Clear coating allows visual inspection of surface underneath.
- ✓ Also provided mold resistance.
- ✓ Insulated both the metal and non-metal parts of the building
- ✓ Long lasting 5-10 years.

Award Winning Energy Saving and Asset Protection Coatings

Patented Synavax™ Energy Protect™ insulation coating was used by the Lafayette Animal Control Center to insulate the walls and ceiling of a building that houses animals in their care.

Before insulating, the building was extremely hot. But after Energy Protect™ coating was applied, the shelter building was much cooler for both the workers and animals and provided them with a healthier and more comfortable environment.

The President of Russo Environmental Materials said, "We were excited at the chance to help the animals and the altruistic people who work with them; showing off what Energy Protect™ can do was an added bonus."
