ISSUE:

Effectively insulate and protect a wooden garden room that houses a model railway system

SOLUTION:

HomeProtect™ Clear Coat Insulation and Mold Resistant Coating.

RESULTS:

- ✓ Kept room warmer
- ✓ Reduced dampness
- ✓ Easy Do-it-Yourself application
- ✓ Insulated effectively
- ✓ 5 Star Rating for Insulation ability
- ✓ 5 Star Rating for ease of application

DISTRIBUTOR:

Award Winning Energy Saving and Asset Protection Coatings

“In Early 2014 I purchased a gallon of HomeProtect™ clear to insulate a wooden garden room, which was built to house a model railway system. Prior to applying the HomeProtect™, I fully protected the interior and exterior with wood preserver, I also sealed the exterior with a proprietary water sealant. The HomeProtect™ was applied as instructed.

It was easy to apply and took no more than 2 to three days to coat all of the 12 ft. x 10 ft. room. **Everyone who entered the room commented on how warm and damp free it was even on cold and wet days.**

I have now moved house and will be erecting a much larger 20 ft. x 16 ft. log cabin, by the way the old garden room was of a shed type construction of tong and groove and as the wood shrunk gaps appeared. As a satisfied customer, I will also be using the same to insulate

and seal the new log cabin which is of the Swedish style constructed from 44 x 110 mm logs, fully confident of the end result.

For application I would give the product 5 stars and for insulative ability again 5 stars, however I cannot comment on the claim of its resistance to mould, except that by the time that my house was sold and I moved out, approximately 1 year, the interior did not show any fungus whatsoever.”

Best wishes.

Tony
