

Case Study

Bandvulc Group- Tire Mold
Heat Exchanger.

GEOGRAPHICAL AREA:

United Kingdom

ISSUE:

Find a better solution for insulation of heat exchanger plates used on tire molds.

SOLUTION:

Heat Shield™ High Heat thermal insulation & corrosion prevention coating.

Coverage: 8-coats

RESULTS:

- ✓ Insulated to reduce heat transfer of heat exchanger plates.
- ✓ Prevented corrosion of the equipment.
- ✓ Allowed visual inspection of the surface.
- ✓ Temperature difference of 30C (prior to cure date)
- ✓ Long lasting - 5-10 years.

Award Winning Energy Saving and Asset Protection Coatings

Bandvulc Tyres is one of the leading suppliers of commercial remould tyres (remold tires) to the transport industry. They operate at the forefront of tyre technology using the best available machines and quality control systems. They needed to reduce heat transfer on heat exchanger plates used on equipment in their facility.

Solution:

"Bandvulc Tyres Ltd. applied Heat Shield™ to the exterior of a heat exchanger plate. The first coat was applied thinly and left to set for just over 20 days. After this period, the coats were applied more liberally up until the 8th coat. The 8th coat result now shows a temperature difference of roughly 30 degrees C."

-Calum Williams, Bandvulc Tyres, Ltd.
