

CASE STUDY

American Red Cross Headquarters

GEOGRAPHICAL AREA:
Central Louisiana

ISSUE:

Encapsulation of Lead
Contaminated Surfaces for
Building Restoration

SOLUTION:

LeadX™

Coverage: 2-coats

RESULTS:

- ✓ Provided a clear coating to preserve the look of the rehabilitated building.
- ✓ Safely and effectively encapsulated any lead contaminated surface.
- ✓ Easy to apply paint on coating.
- ✓ Also provides mold, moisture and UV resistance.
- ✓ Long lasting 5-10 years.

Award Winning Energy Saving and Asset Protection Coatings

In 2006, the Central Louisiana Chapter of the American Red Cross received a gift of \$958,629 from the Canadian Red Cross specifically designated to support the construction of an American Red Cross chapter headquarters in Central Louisiana. After finding a suitable property to rehabilitate into their headquarters, they began the first phase. The Environmental Site Assessment revealed concerns about lead in paint which needed to be addressed.

LeadX™, clear lead encapsulation coating was chosen to encapsulate lead paint and offered an environmentally friendly way to remediate lead-based paint that was an affordable option that allowed effective remediation.
