- ✓ Clear coating allows the original look of the home to shine through.
- ✓ Provides resistance to mold, moisture and UV damage.
- ✓ Long lasting - 5-10 years.

Award Winning Energy Saving and Asset Protection Coatings

- Customer Quote -

"I live in a 2-bedrooomed bungalow with solid walls. In June 07' I painted the internal outside walls with HomeProtectTM and also the immersion tank and pipes.

The paint was very easy to use, with good coverage, considering I had to apply 3 coats.

Prior to painting, our heating costs were quite high compared to what they are now. In fact, since applying the HomeProtectTM I have been able to lower the thermostat from 5.5/6 to 3, basically halving the temperature. The bungalow is definitely warmer. I am now going to HomeProtectTM the outside external walls which should result in even greater savings in heating costs.

I would certainly recommend HomeProtectTM to anyone who wants to reduce their heating costs. In fact, my sister and her two sons, have now HomeProtected their homes.

The customer service has been excellent and the delivery of the product extremely fast (3/4 days). Wishing you all the best with your agency for HomeProtectTM ."

Yours sincerely,
Daniel O'Beirne
