Who We Help

SUSTAINABLE LEADERS. CHARGED WITH SUSTAINABLE MEASURES.

Thermal Insulation

Corrosion | CUI

Mold Resistance

Bold Plans | Bold Results

Clients typically report energy savings in sustainable manufacturing applications between 10%-25%. The typical payback period is 6 to 18 months. The applications can be done while equipment is inservice by in-house personnel or a contractor. There is a 10 year warranty. Plus, a significant ROI with long-term energy savings, reduced maintenance costs, and a longer asset lifespan. Now that's brilliant!

What We Do
 RAPIDLY DEPLOYED SUSTAINABLE SOLUTIONS. SPECTACULAR RESULTS. BRILLIANT!

MOLD CORROSION CHEMICAL THERMAL

Safe Touch Reduce GHG UV Protection

Our Multiple Benefits

Syneffex™ thermal insulation coatings are powerful insulators that also prevent corrosion | CUI along with resistance to UV, moisture, harsh chemicals, and mold and fungi growth. A significant economic benefit is realized from the multiple performance attributes and the resistance to degradation that destroys most conventional insulations. Put Syneffex™ to work multi-tasking for you!

Our Sustainable Coatings

develops and commercializes new and innovative applications for sustainability via the science of nanotechnology. Our patented product line is engineered with nanotechnology based material that provides insulation, energy savings, and protective benefits such as mold resistance, UV resistance, moisture resistance, corrosion/CUI resistance, chemical resistance, and lead encapsulation.

Sustainability Accelerated™

Our award winning coatings have been deployed for over a decade in 60 plus countries worldwide for energy savings, reduction of carbon emissions, surface protection, environmental remediation, and worker safety applications. Sustainable leaders around the globe choose Syneffex™ for rapid deployment and a significant ROI.
